

MarkIDS-L

The MarkIDS-L is a convenient and economical bulk ink supply system that allows feeding four or eight HP 45 print cartridges with a single ink source. The ink detection system alerts the operator when the ink supply runs low. Ink regulators sold as accessories allow printing system configuration flexibility. Side-printing and down-printing are possible. Leak-free connectors simplify consumables management.

Specifications

Input Voltage

- 24 VDC (AC Adapter included)
