Mark**IDS**

Maximize ink utilization while reducing cost per print.

The MarkIDS is a robust, convenient and economical system for supplying ink to your coding and marking systems. Utilizing two HP 350 cc ink supplies, the MarkIDS feeds up to 8 printheads and automatically switches when a supply is empty. Intuitive control lights alert operators to the system's ink level and system status. The regulators (sold separately) utilize non-spill, quick-release connectors for easy, clean connections between the printhead and MarkIDS. Side printing applications are conveniently supported with the MarkIDS Regulator System.

The MarkIDS is targeted to OEM markets and can be repackaged to match your product line.

Physical/Electrical
Control box that holds two HP industrial bulk supplies
Simple 24VDC electrical connection with power brick
Supply up to eight printheads
Empty cartridge warning light

Accessories
Regulator Assembly
    Includes 36" tube to MarkIDS
    4" or 26" tube from regulator to cartridge pigtail
12" Extension Tube
24" Extension Tube
Priming Syringe
Light Tree
Audible Alerts

Advantages
More ink capacity
Low operator intervention
Replenish ink supply without stopping production flow
Lower cost per delivered mL of ink than standard cartridges
